PROFILE

I build **AI products end to end**: the interface, the backend, the model and the launch. I shipped **Yulya**, a live Discord AI companion with voice, memory and an in-server economy, and published a family of fine-tuned models on Hugging Face and Ollama. Self-taught since 2022, from posters and logos to full stack and AI, finishing my BCA in 2027. Winner of multiple college-level coding competitions. **Open to work.**
